Time Budget

52 questions reduced to 28 within 30-min limit

Pi scoring + construct coverage drive transparent selection

Visuals serve as decision support, not just display

How the Ranking Pipeline Works

A single reproducible pipeline transforms the final ranked CSV into scoring, recommendations, figures, dashboard outputs, and client-facing review artifacts.

What Improved in the Final Design

BEFORE

- Broader 52-question corpus
- Harder to review and prioritize
- Dominated by obvious generic items
- No visual decision support

AFTER

- Compact 28-question module
- Clear Pi-driven ranking surface
- Balanced construct coverage
- Synchronized visual artifacts

MODULE COMPOSITION

Generic Core

Finance

Pandemic / Disaster (20)

RECOMMENDATIONS

6

generic

8

crisis-specific

DEPLOYABLE WORDING

GENERIC

- Financial strain
- Work interruption
- Income continuity
- Government assistance
- Housing instability
- Wellbeing check

SPECIFIC

- Pandemic earnings loss
- Emergency payments
- Evacuation
- Home damage severity
- Disaster distress
- Temporary housing

The final system produces a compact, interpretable, and field-usable crisis module supported by synchronized visuals and a transparent scoring workflow.
