

Final Report

Stakeholder-facing summary of the refreshed PSID crisis-module package

52 Ranked questions	28 Selected questions	29.98 Selected minutes	2.201 Average Ri
---	---	--	--

Executive summary

- The final client-facing category model is now Generic versus Specific.
- The previous Financial Crisis label has been removed as a final category and retained only as a traceability field.
- The final selected module contains 28 questions and stays under the 30-minute administration cap.
- The package now separates technical explanation, deployable wording, and stakeholder reporting into distinct deliverables.

Background and Objective

Why the package was refreshed and what changed

Project goal

The PSID archive contains crisis-related items from multiple historical contexts. The client requirement was to turn that archive into a simpler and more defensible package: a cleaner deployable questionnaire, a technical codebook, and a stakeholder-facing report that explains the shortlist without overemphasizing finance-only content.

What changed

- Binary Generic/Specific category model replaces the older multi-label final structure.
- Financial Crisis is no longer treated as a separate final module category.
- The 0.7 client threshold is implemented on normalized Ri rather than raw Ri.
- The final CSV is rebuilt from the raw integrated source during every refresh.

Methodology

How the ranking and categorization logic works in plain language

Pipeline overview

- Load 52 historical questions from the integrated source file.
- Reuse stored keyword lists and map them to constructs such as Employment, Government Aid, and Trauma / Health.
- Calculate utility, burden, and the baseline Ri ranking score.
- Normalize Ri and apply the 0.7 threshold to assign Generic or Specific.
- Compute the enhanced Pi score using rarity, construct coverage, portability, and redundancy penalties.
- Select the final module greedily under the 30-minute cap.

Key formulas

Field	Formula
Ri	U_i / B_i
Bi	$\max(0.10 * \text{word_count} + 0.20 * \text{complexity}, 0.1)$
minutes	$(\text{word_count} * 7) / 60$
ri_threshold_score	$(R_i - \min(R_i)) / (\max(R_i) - \min(R_i))$
Pi	$\text{augmented_utility} / [B_i * (1 + 0.65 * \text{redundancy_scaled})]$

Results

Updated counts, source mix, and top questions

Headline metrics

Metric	Value	Source	Selected
Selected questions	28	Hurricane Katrina 2007	14
Selected minutes	29.98	COVID-19	8
Average Ri	2.201	Govt Shutdown Income	3
Average Pi	2.561	Understanding Society	2
Generic rows	3	Govt Shutdown Crisis	1
Specific rows	49		

Top Generic and Specific examples

Generic

Variable	Question	Ri
GEN_LOSE_EARNINGS_PANDEMIC	Did you lose earnings because of the pandemic?	5.667
GEN_EXPERIENCED_FINANCIAL_DIFFICULTIES	Have you experienced any financial difficulties because of the crisis?	5.667
GEN_RECEIVE_STIMULUS_PAYMENT_OR_OTHER_EMERGENCY_SUPPORT	Did you receive a stimulus payment or other emergency government support?	4.667

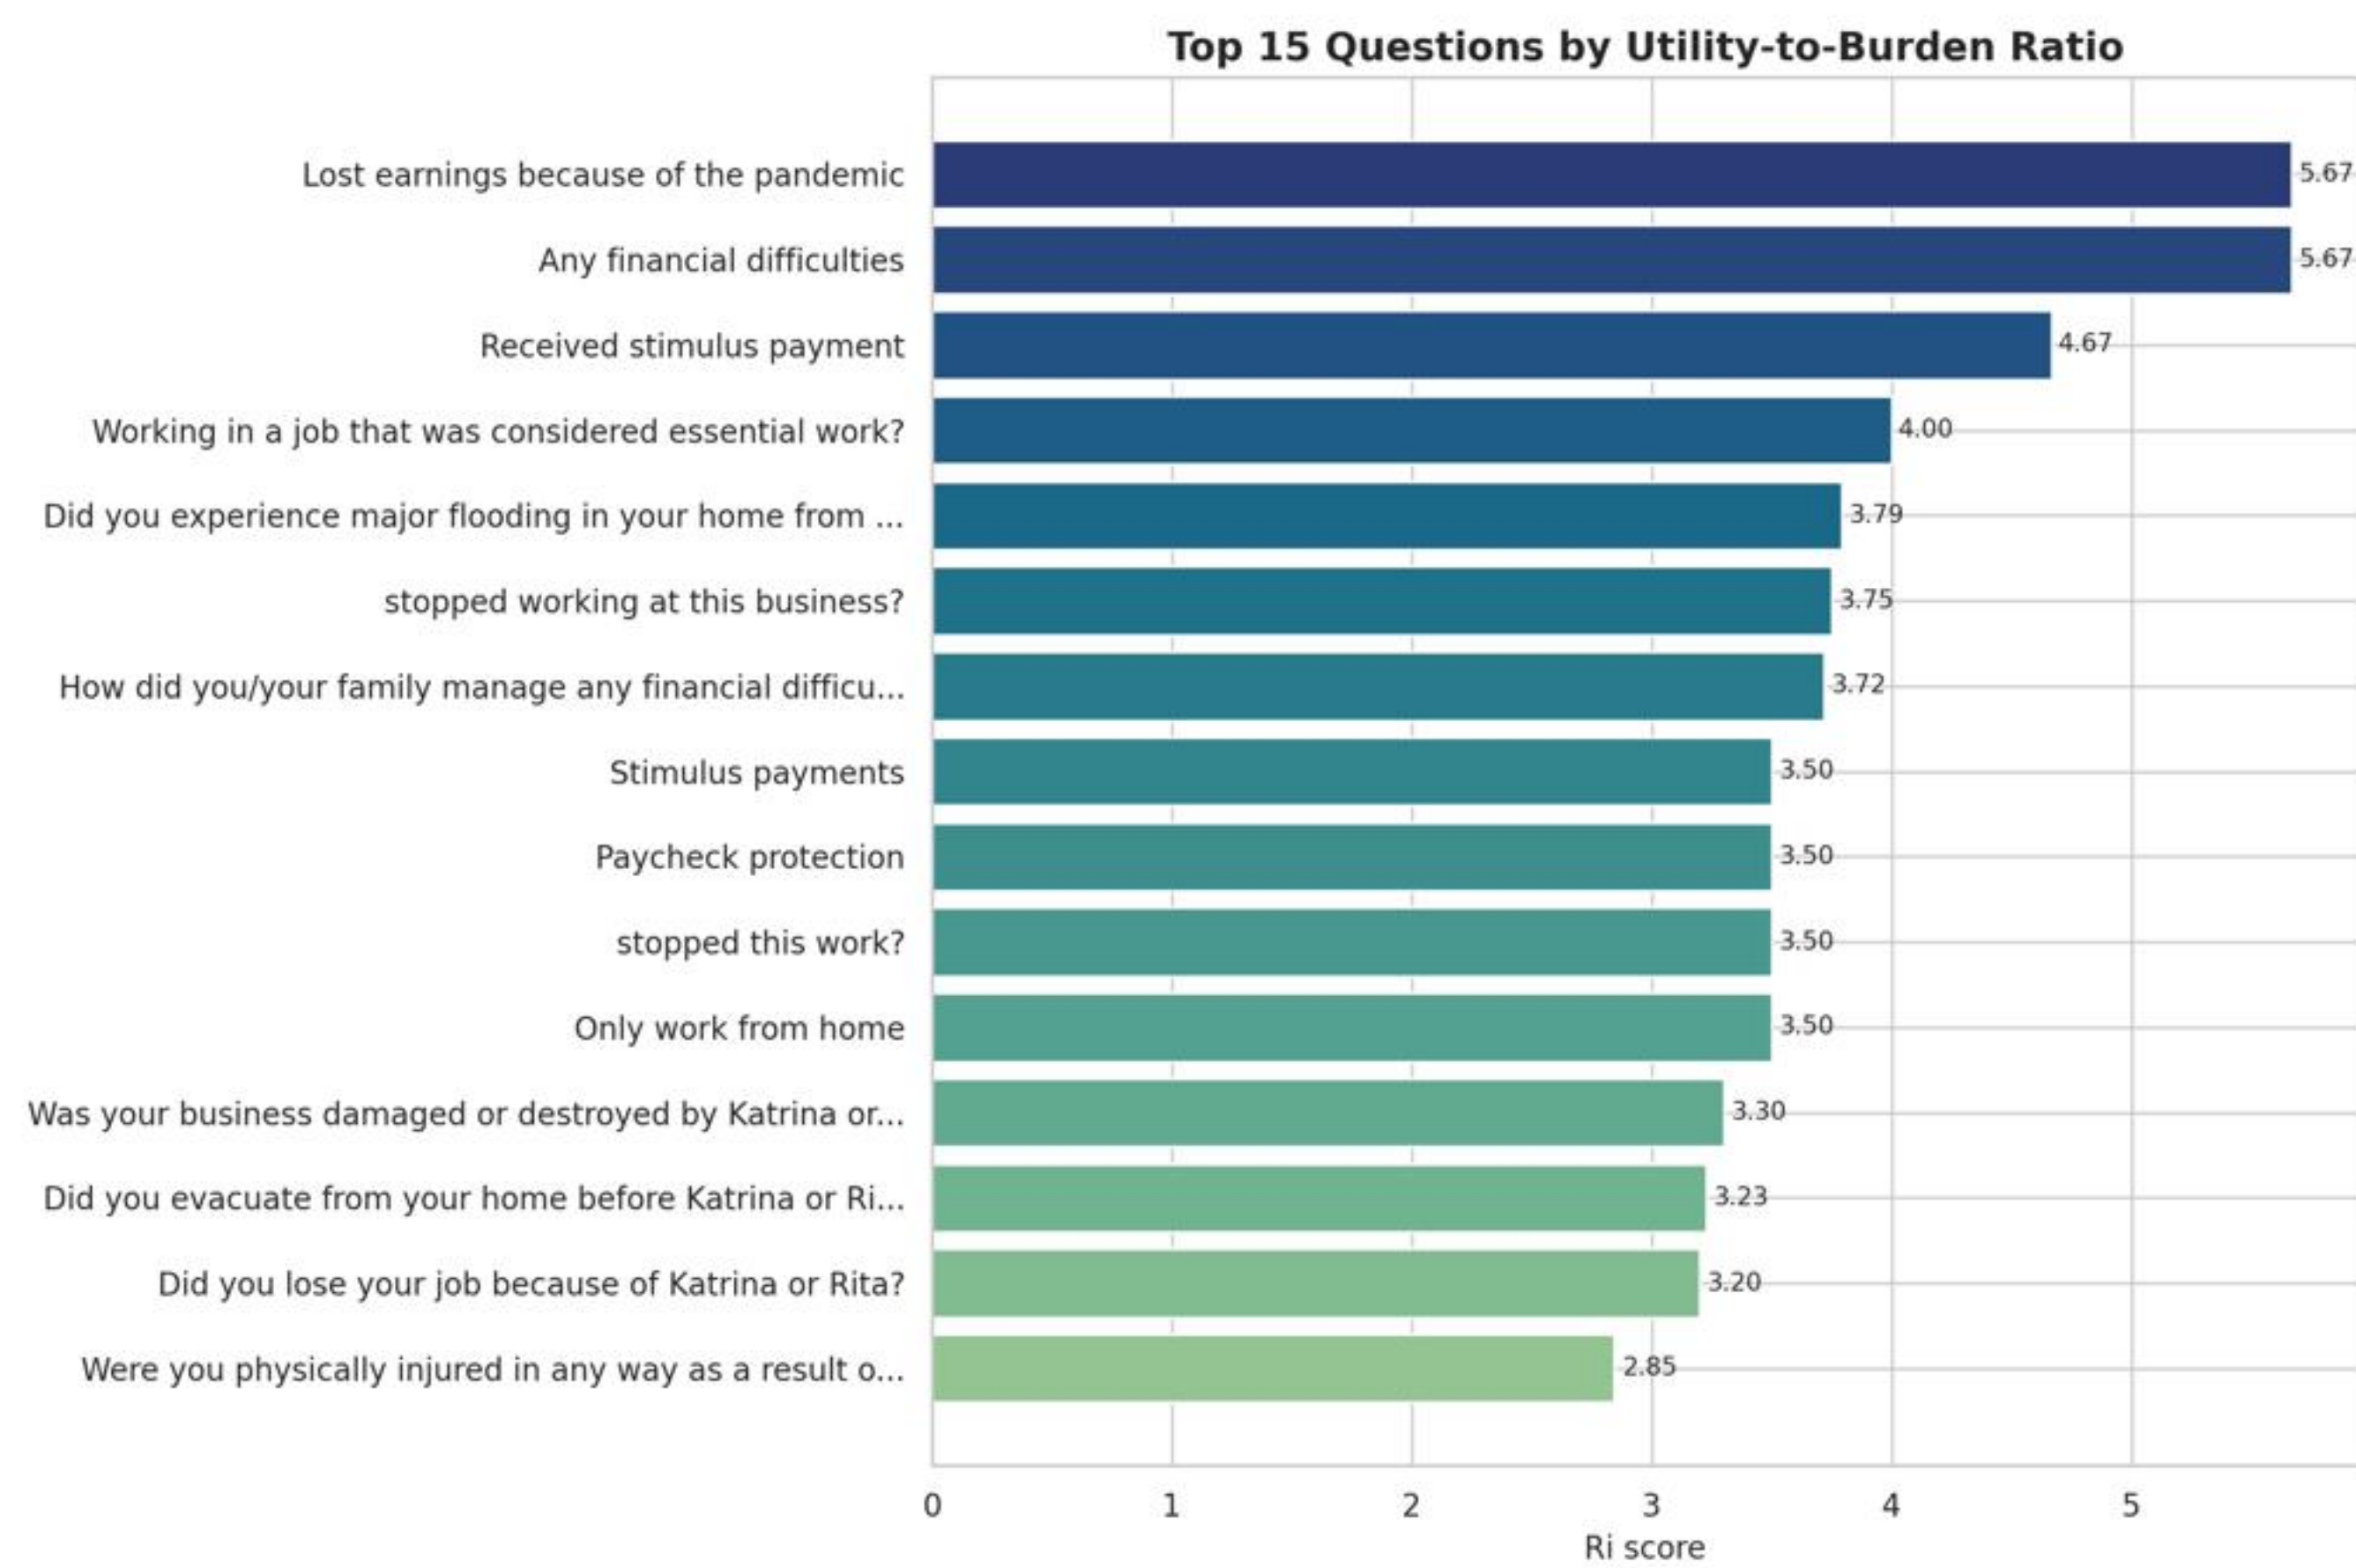

Specific

Variable	Question	Ri
SPC_WORKING_JOB_CONSIDERED_ESSENTIAL_DURING_CRISIS	Were you working in a job that was considered essential during the crisis?	4.000
SPC_EXPERIENCE_MAJOR_FLOODING_IN_HOME_DURING_DISASTER	Did you experience major flooding in your home during the disaster?	3.792
SPC_STOPPED_WORKING_BUSINESS_OR_SELF_EMPLOYMENT_DURING_CRISIS	Have you stopped working at this business because of the crisis?	3.750
SPC_HOUSEHOLD_MANAGE_FINANCIAL_DIFFICULTIES_CAUSED_BY_SHUTDOWN_OR_CRISIS	How did your household manage financial difficulties caused by the shutdown or crisis?	3.719
SPC_RECEIVE_PAYCHECK_PROTECTION_OR_OTHER_EMERGENCY_BUSINESS_SUPPORT	Did you receive paycheck protection or other emergency business support?	3.500

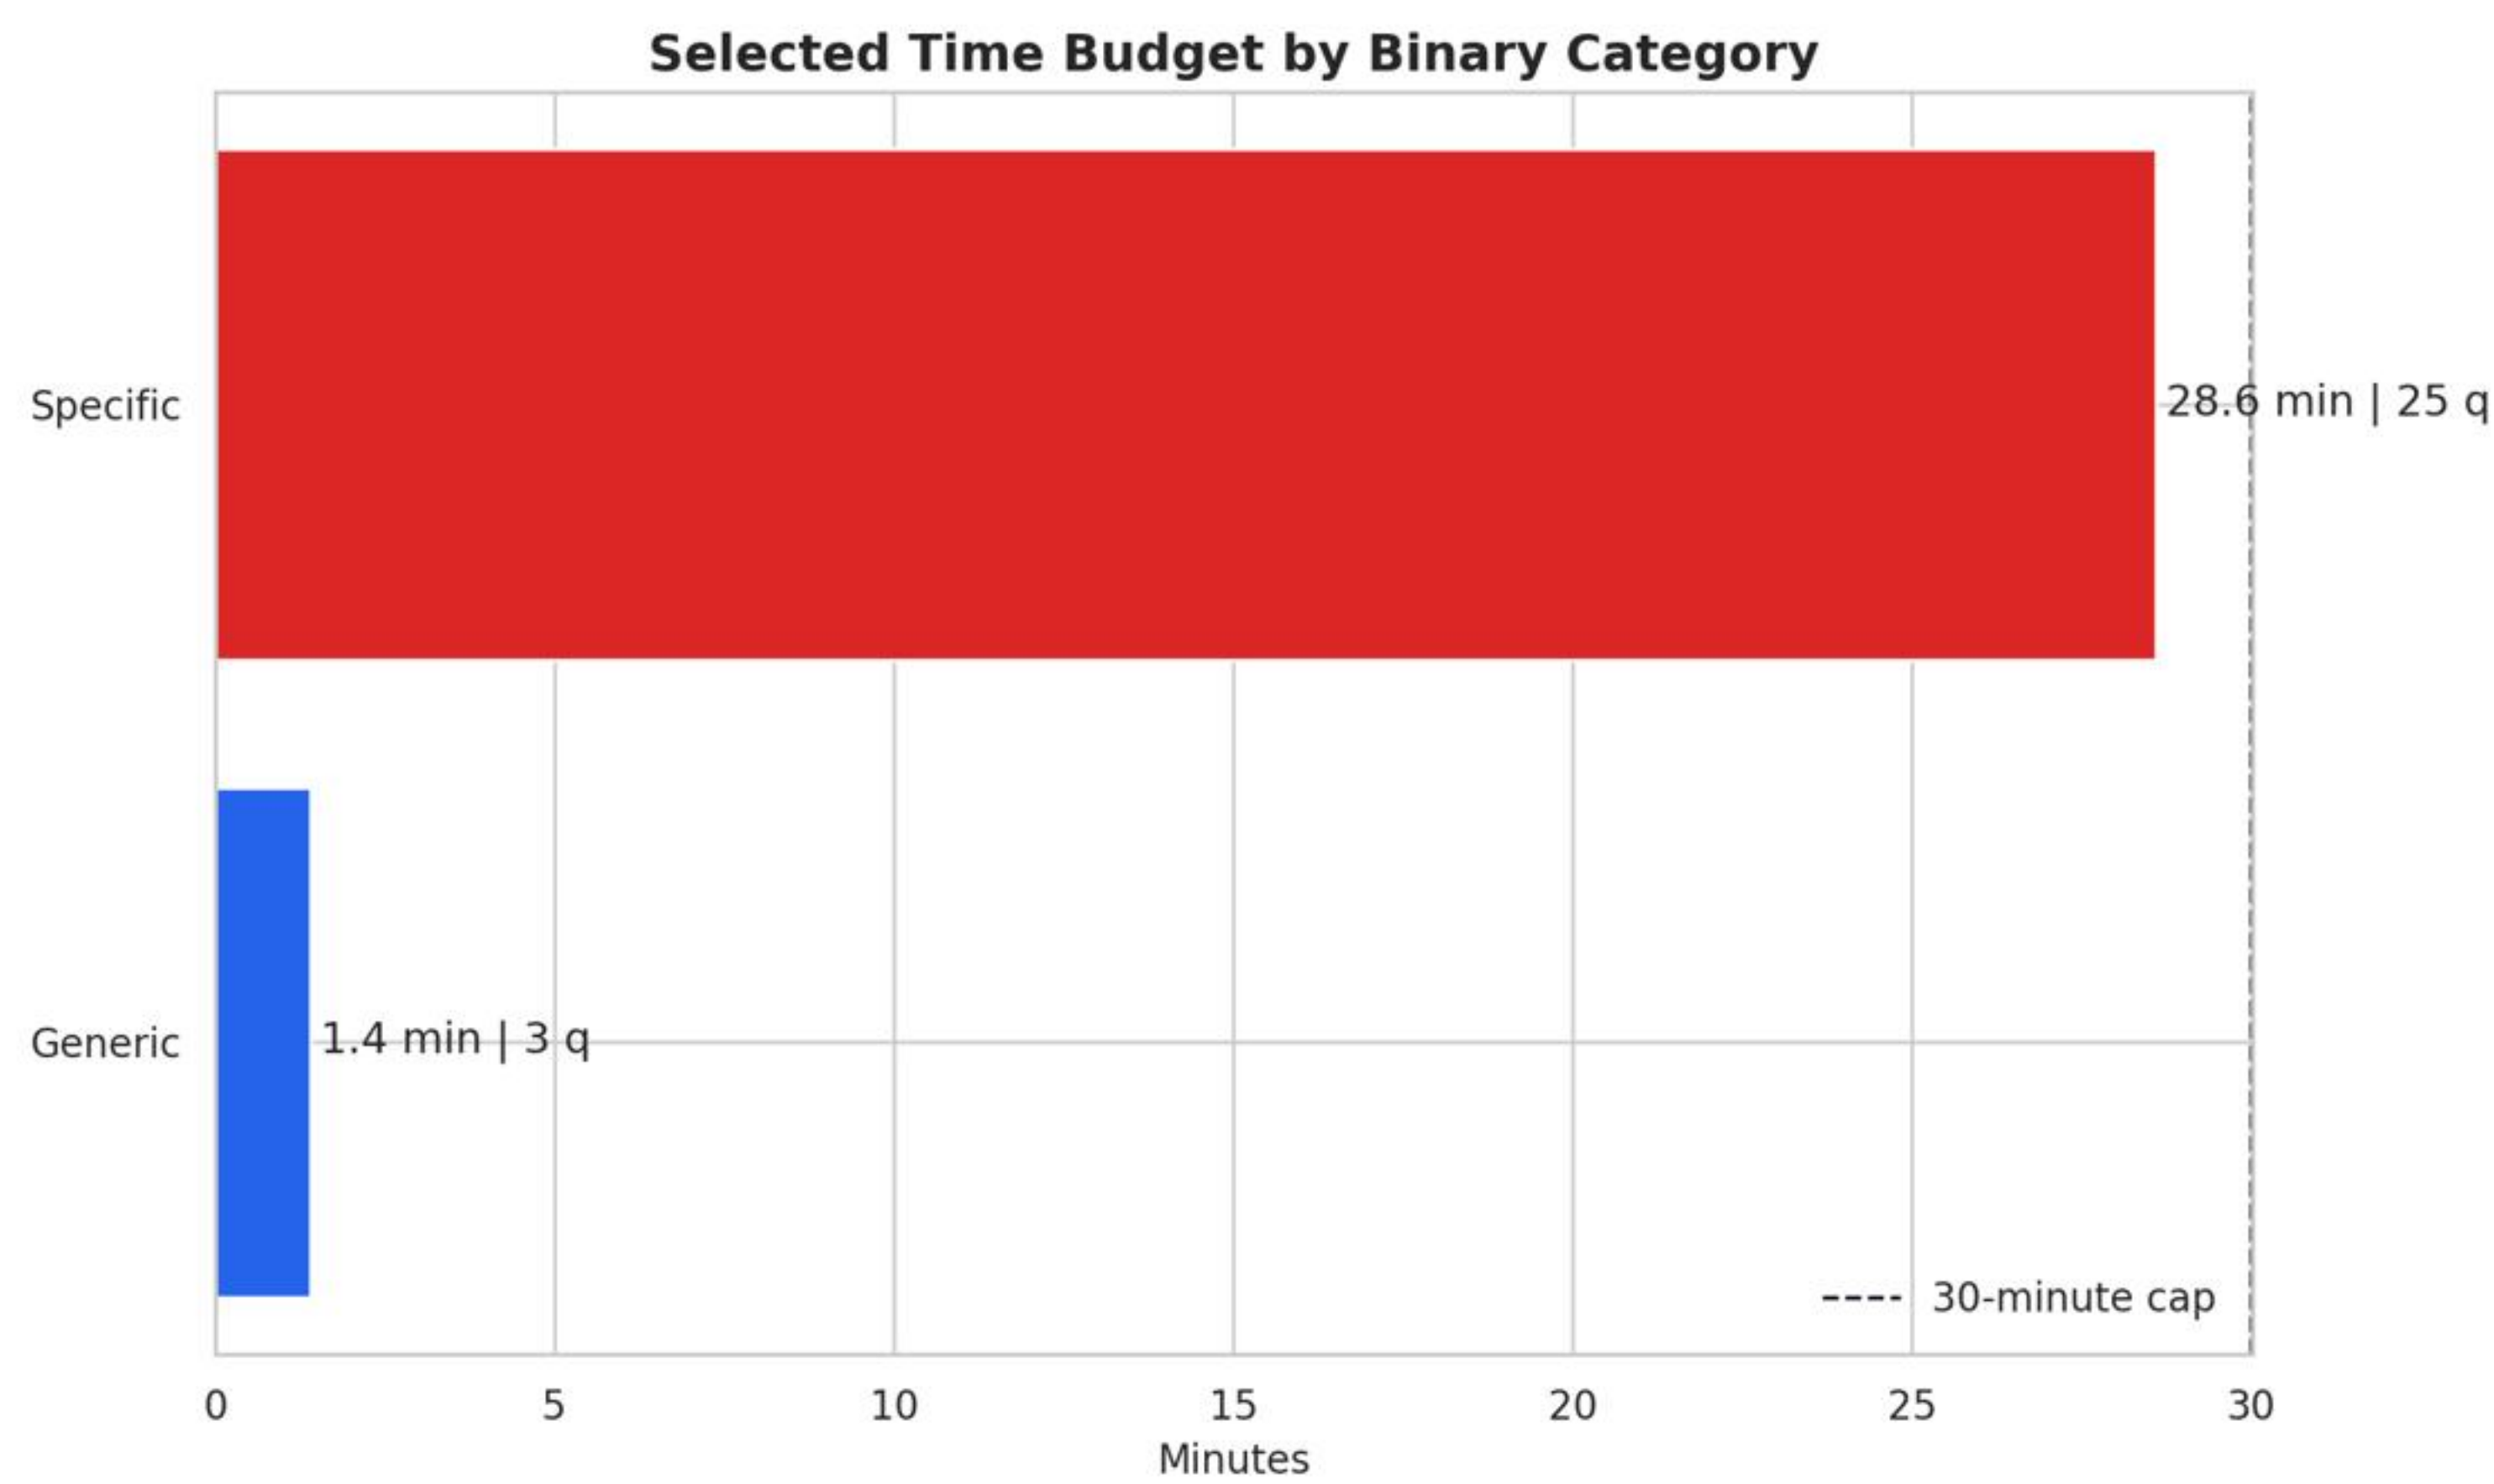

Analytical Figures

Selected figures from the refreshed artifact bundle

Time budget by category

Discussion of Skew

Why financial questions appear fewer and why demographics fall away

Main interpretation

- The earlier output looked skewed partly because Financial Crisis appeared as its own visible module label.
- In the refreshed package, financial items compete inside Specific alongside disaster and pandemic items.
- Several financial items are close variants of one another, so redundancy penalties push some of them down.
- Katrina disaster items remain numerous and competitive, which reduces the share of finance-labeled items in the final shortlist.
- Demographic-only rows score lower on average because they add context rather than direct crisis signal.

Demographic versus non-demographic averages

Group	Rows	Average Ri	Average Pi
Demographics only	3	1.354	2.189
Non-demographic crisis items	49	2.253	2.584

Takeaway: the refreshed package still retains high-value financial material, but it no longer presents finance as if it were the only or dominant crisis dimension. The selected module is better read as a broader shock-and-response instrument covering economic disruption, aid exposure, housing instability, and trauma-related impact.

Deliverables Summary

What is included for client use

Package contents

Deliverable	Use
Master_Questionnaire.xlsx	Internal spreadsheet with all rows, categories, source, universe, and scores
Deployable_Questionnaire.pdf	Questionnaire for deployment using cleaned wording and no demographics
Codebook.pdf	Technical documentation of functions, formulas, schema, and thresholds
Final_Report.pdf	Stakeholder-facing explanation of results and interpretation

Recommended next steps

- Review whether one of the current Generic items should be manually demoted if the client wants a stricter event-agnostic core.
- Compare the deployable questionnaire row by row against Tom's preferred formatting template before sign-off.
- Use the dashboard and figures as supplemental analytical materials rather than required client-facing content unless requested.
